

GT Anomaly Description

A rusty wrench is bolted to a control panel to hold a switch in a permenant position.

GT Anomaly Description

There is a soda can in the toilet bowl.

GT Anomaly Description

(1)The second from left chair in the first row is in the wrong color. (2)There is a chair missing on the second row from the back.

Human Explanation

The presence of the rusty wrench prevents the usage of the switch.

Human Explanation

A toilet needs to be devoid of any objects in the bowl that might cause blockages for proper functioning.

Human Explanation

The regularly alternating pattern is broken due to the second from left chair in the first row being red instead of white.

GPT4o Explanation

Using a rusty wrench to hold a switch in place on a control panel is unusual because it is an improvised and potentially unsafe method for securing electrical components, which should be done with proper tools and mechanisms.

GPT4o Explanation

A soda can is typically found in kitchens or dining areas, not in a toilet bowl, which is meant for sanitation purposes.

GPT4o Explanation

The second chair from the left in the first row is white, while the rest of the chairs in that row are red, disrupting the color pattern.
